

## TECHNICAL SHEET

# D-CITY

---

D-City, the new KYT urban full face helmet in thermoplastic with ADT-Advanced technology; its fascinating shapes have been deeply studied for daily use in the short and medium trips without neglecting the stylistic and ergonomic aspects.

The mechanisms of the visor and air intakes have been designed to give, at the same time, easy use and efficiency.

The high-quality removable interiors have been optimized to offer the best performance in terms of comfort and moisture flow inside the helmet.

The visor guarantees wide visibility and aerodynamic protection while the retractable sun visor is a comfortable and indispensable sun protection system that can be easily activated with a cable button, elegantly integrated into the shape of the shell.

### SHELL

The shell is made in two sizes [M and L] and is produced in ADT-Advance, a mix of thermoplastic resins with a very high impact resistance.

### PROTECTIVE POLYSTYRENE

Internal polystyrene realized in two sizes [M and L] to obtain a better ergonomics and a variable density. This characteristic allows a gradual and progressive absorption of the energy produced by the impact.

Even if the bigger part of the energy created by the impact is absorbed by the external shell, thanks to its deformation, the role of polystyrene is determinant for the absorption of the residual energy.

### VISOR

The visor is made of injection-molded polycarbonate with anti-scratch treatment. The visor is easily removable, thanks to a brand new and practical mechanism that does not require the use of tools. The wide field of vision and the aerodynamic protection of the visor make D-City an ideal helmet for short and medium-range trips.

# D-CITY

---

### **PINLOCK**

D-City is ready for Antifog PINLOCK Max Vision 120 [not included].

### **SUN VISOR**

D-City is equipped with an internal sun visor with wide protection that can be easily operated with the left hand thanks to a sliding button positioned on the lower base of the shell.

### **VENTILATION**

Particular channelings obtained on polystyrene, allow to work in symbiosis with the several air intakes an optimal ventilation into the helmet and a quickly exhaust of the hot air.

### **INNERS**

They are made of soft breathable bielastic fabric with synthetic fibers, that offer high sweat absorption and keep fresh and dry. Crown padding and cheek pads are easily removable.

### **RETENTION SYSTEM**

QRM-micrometric The retention system is equipped of micrometric buckle.

Homologations:	ECE 22-06
Commercial Name:	KYT D-CITY
Description:	Open face protective helmet
Materials shell:	thermoplastic – advanced
Polystyrene:	protective polystyrene [M and L]
Visor:	clear antiscratch visor, inner sun visor
Retention System:	polyestere tape 24 mm – micrometric buckle
Approx weight:	1300 ± 50 in shell M
Nr. Shell:	2
Nr. Polystyrene:	2
